US Retail Sales (Sep 2026) — Post-Event Review (English) v20261015-2156-post

> INTRADAY market snapshot as of 09:57 ET — close review pending | Locked pre-event book v20261015-1805 (2026-10-15T18:05), not rewritten | Not investment advice

30-second take

1. **What happened:** US Retail Sales (Sep 2026) control = +0.1% vs locked consensus 0.3% / locked OS 0.0%. Locked-rule bucket: **strong** (fake-strong sub-scenario: headline ≥0.7% on gasoline prices, control ≤0.1%); quality bucket: **inline**.
2. **Markets:** 10Y -13.2bp on the day, of which -10.9bp happened BEFORE 08:30; release window (08:29→09:15 ET) -2.7bp, 2Y (futures est.) -2.0bp. Kalshi October hike 28% → peak 36% → 28% at T+45 (prior-day 43%).
3. **Lesson:** split the time windows; a spike that reverses = the market looked through the headline. Tech weakness (NDX -1.69%, SOX -4.18%) was mostly pre-release (AI-credit/positioning), not this print.
