Fed Chair Warsh × IMF Georgieva Fireside Chat — Pre-Event Book, English twin (v20261015-1805)

> **Time: Thu 2026-10-15 23:30 ET = Fri 2026-10-16 11:30 SGT** (Bangkok 10:30) | **CONFIRMED** (federalreserve.gov October 2026 calendar, live-streamed). Last Chair appearance before the Oct 27–28 FOMC blackout (from Oct 17). Locked 2026-10-15 18:05 SGT, before tonight's PPI/retail data. Not investment advice.

Context (FACT)

Sep 16: unanimous 25bp hike to 3.75–4.00% — "removed a dose of accommodation"; "I am not going to pre-judge any future decisions"; forward guidance dropped; five task forces (incl. productivity/AI, balance sheet). Sep CPI +0.6% / 3.7%, core +0.3% / 2.6%. Oct-28 hike odds 22% pre-CPI → 41.5% / 49% / 32.7% (FedWatch via Yahoo, WSJ, Cboe, 10/14).

OS hypothesis

Neutral 50% / Hawkish 30% / Dovish 20% (subjective; base rate unavailable — not calibrated). Hawkish tail > dovish tail. Conditional: if tonight's PPI and retail are both hot, even neutral wording will be read as not opposing October.

Scenarios

Scenario	Trigger wording	Prob	Oct odds	2Y	USDJPY	NQ / Asia tech
Hawkish	inflation not moving "clearly and at sufficient speed"; second-round energy; conditions "not restrictive"	30%	≥55%	+3~+6bp	+0.3~+0.6	−0.5~−1%

Scenario	Trigger wording	Prob	Oct odds	2Y	USDJPY	NQ / Asia tech
Neutral	“won’t pre-judge”; global/IMF/independence/AI	50%	±5pp	±2bp	flat	data/ earnings-driven
Dovish	look through energy; cumulative effect; AI supply-side disinflation	20%	≤30%	−3~−6bp	−0.3~−0.6	+0.3~+0.8%

Live checklist (from 11:30 SGT Fri)

Mentions of October/next meeting; the inflation-bar phrase; “look through” vs “second-round”; financial conditions; 2Y futures ±3bp in 15 min; USD/JPY ±0.3; TSM/Korea memory (confounded by TSMC results); AI productivity framing; balance sheet.

Affected names

Asia first: TSM, Korea memory (MU/SIMO read-across), Nikkei via USD/JPY. US rate-sensitive: ARM, PLTR, RKLB, CRWV, CRWD, MRVL, TSLA. AI capex chain: NVDA, AVGO, AMD, EME, PWR. Consumer: CCL.

Falsifiers

1. Hawkish words but 2Y <+2bp → priced/committee > chair. 2. Market moves on a non-policy chat → other drivers; chain invalid that day. 3. Dovish words + 10Y up → term-premium fear. 4. Explicit path guidance despite our 50% neutral → calibration error.

Self-challenge

“Neutral 50%” is subjective; we may over-weight one person on a committee; thin Asian liquidity may exaggerate first moves.
