US PPI (Sep 2026) Pre-Event Book — English twin (v20261014-1806)

> **Release: Thu 2026-10-15 08:30 ET = 20:30 SGT** | **CONFIRMED** (bls.gov PPI schedule). Snapshot locked with this version. Not investment advice.

Executive summary

- **MARKET EXP (Helious 2026-10-14):** Final Demand PPI **+0.50% m/m, 5.3% y/y**. August actual **+0.40% / ~5.4%** (FRED PPIFIS index 157.411).
- **Analyst view (NOT consensus):** Continuum Economics (2026-10-01) +0.6% headline (energy-led), +0.3% core ex food/energy.
- **OS HYPOTHESIS:** Sit on Helious **+0.50% / 5.3%**; probabilities Cool 25% / Inline 50% / Hot 25%. No fake-precise independent model.
- **Why it matters:** Fed prefers **PCE**; PPI portfolio-management, healthcare, airfares/trade margins map into core PCE — especially after tonight's locked CPI (v20261013-1803, do not rewrite).
- **Watch:** FD MoM ≤0.2 cool / 0.3–0.6 inline / ≥0.7 hot; services components; 2Y first 15 minutes; consistency with CPI structure.

Scenarios (HYPOTHESIS)

Scenario	Threshold	Prob	2Y	10Y	USDJPY	NDX	SOX
Cool	FD MoM ≤0.2% or YoY ≤5.0%	25%	−5~−10 bp	−3~−8bp	−0.3~−0.8	+0.5~+1.2%	+0.8~+2%
Inline	MoM 0.3–0.6%; YoY ~5.1–5.5%	50%	±3bp	±4bp	flat	±0.5%	AI/ earnings driven
Hot	MoM ≥0.7% or YoY ≥5.6%	25%	+6~+12 bp	+4~+8bp	+0.4~+0.9	−0.8~−1.8%	−1~−2.5%

Falsifiers (one-liners)

1. Hot print but 2Y <+3bp → priced/growth trade. 2. Cool print but SOX <−1.5% → industry narrative dominates. 3. Energy-led hot headline with soft services but breakevens spike → second-round fear. 4. Miss our Inline band → forecast error log. 5. PPI vs CPI services diverge and PCE expectations unmoved → cut PPI→PCE weight.
